 - A) Clean the product with water-slicked soft towel or bathing soap solution once in a day or two to keep the plated surface clean and free from any deposits.
 - B) Don't use any type of cleaning/detergent agents which contain acids or chemicals such as flush cleaner, Harpic, etc.
 - C) Do not rub special color combination products with abrasive materials like emery paper or cleaning powder, as this can cause abrasion.
 - D) Special colour combination products should not be rubbed by emery paper/cleaning powder. This can cause abrasion.

1. Water Scaling : Due to presence of minerals and salt in water, scaling formed on the product if it is not cleaned regularly. The products should be cleaned gently at regular intervals. Also take extra care to clean the edges and corners of the products because these areas are more vulnerable for scale setting. Clean the aerators from time to time for a perfect foam flow of water from the fittings. The property of water being used is very important for your plumbing installations (Pipes etc.) as well as your own hygiene. The hardness of water should not exceed 300 - 400 p.p.m.

2. Acid fumes : When we clean the tiles or floors in the bathroom with cleaning agents which contain or chemicals, acid fumes are formed because the basic material used in the products resulting in damage to the outer finish or coating.

3. Scratching while cleaning : Scratching or scrubbing occurs due to hard nature of cloth or coarse cleaning powder being used for cleaning. Use a gently fluffy soft cloth for cleaning the surface.

4. Atmospheric Condition : This condition applies mostly to salt content in the air in coastal areas, sometime the are reacts with brass and black spots emerge on the surface or product Therefore the product is required to be cleaned regularly. At the time of installation of these products. Cover the products with the cloth covers provided in packaging or with polythene till the time you start using.
